What’s next?

- **July 1, 12:30:** Introduction to Machine Learning with Python
- **July 15, 12:00:** Preliminary talks
  - Given together in the same groups as background talks
  - Duration: 10 minutes + 5 minutes discussion
  - Less formal, just so that we know everyone is at the same point of the project
  - Content:
    - Information about your dataset (size, other interesting statistics)
    - Information about your labels (how many, imbalance)
    - Information about your features (which features do you plan to use, any other important information like distribution,...)
    - Information about your algorithm (which algorithm do you plan to use)
    - How do you plan to calculate baseline/random prediction
